

HSSE Policy

New Fortress Energy Inc. (NASDAQ: NFE, “we” or “New Fortress Energy”) continuously strives to achieve excellence in occupational health, worker safety, security, and environmental performance and to be industry leaders in accident prevention and risk management. We are committed to complying with all applicable health, safety, and environmental laws and regulations where we operate to: (i) ensure the health and safety of our employees, customers, the local communities, and others; and (ii) protect the environment as well as the assets we operate. The accountability and responsibility for these principles applies to all levels within our organization, through the proactive application of comprehensive and integrated management systems.

Health & Safety

New Fortress Energy’s overall safety objective is to incur zero high-risk incidents and zero lost time injuries. We recognize and are committed to the following health and safety principles:

- Active participation of NFE leadership in the management of health and safety.
- The right and the responsibility of every employee to contribute to safe work performance.
- A focus on the reduction, elimination, and/or control of hazards for our employees, contractors, visitors, and the population potentially affected by our operations.
- Thorough planning for emergency situations.

Security

New Fortress Energy maintains a structured security management approach based on the foundation of continuous risk management for the security of our personnel, operational assets, and the general public. We are dedicated to the following security guiding principles:

- Proactive assessment of risk resulting in the prevention of security incidents.
- Mitigation of our exposure in all areas of personal, physical, and organizational and cyber security.
- Active promotion of a collaborative approach across the organization towards security management
- A focus on the fundamental elements of preparedness, prevention, detection, response, and recovery.

Environment

New Fortress Energy strives to protect and enhance the ecosystems and communities affected by our activities while managing a successful business. We value accountability, partnership and open communication and are dedicated to the following environmental principles:

- Management and mitigation of the impacts and risks to the environment associated with our operations with an overall goal of continual improvement.
- Careful consideration of the socio-economic and environmental expectations of stakeholders.
- Efficient, sustainable, and responsible use of the natural resources entrusted to us.
- Engagement in open and transparent dialogue with stakeholders to achieve a greater understanding of expectations and constraints in order to develop responsible and realistic solutions.
